4 YARD FEL DUMPSTER

PLAST-AX supply from stock on hand

4 YARD FEL ANGLE TOP DUMPSTER

- Lowest fill height
- Freights best with 6yd³

Capacity:	800 Gallons
Dimensions (in):	6ft x 5ft x 5ft (h)
Fill Height:	40 in + 6 in with castors
FEL Fork Width:	75 in (centres)
Tare Weight:	285 lb
Weight Rating:	2645 lb

Like the 6-yard, it has a very thick base to handle a lift straight onto concrete, gravel, or grass. In these situations, traditional steel dumpsters are prone to rusting out quickly, whereas the PLAST-AX dumpsters can sit directly on the ground winter after winter in wet conditions.

On wheels, the PLAST-AX 4-yard is easily maneuvered by hand.

A PLAST-AX 4-yard on wheels combines the efficiency of a large collection with the added convenience of moving the dumpster to the waste stream (rather than having to take the waste out to the dumpster).

PLAST-AX LIDS

In detail

Lids open onto the back ribbed section of the 4-yard and 6-yard dumpsters in a tongue-and-groove style, ensuring the entire surface area is in contact—rather than concentrating stress at a single point

The recess in the top rim creates a clean lift-access point—once again leveraging the dumpster's design without compromising lid strength

2 & 3 YARD LOCKBAR

Our lock bar & brackets are hot dip galvanised and fit up retrospectively to the dumpsters. The bar and bracket are bolted in to captivated female fixings housed securely in the box section top rim.

WHEELS

In detail

5-inch wheel sets are supplied as 2x Fixed Directional, 2x Swivel Braked Castors.

Imaged: 2645lb rated Red Polyurethane (PU) outer on a Cast Iron inner.

Imaged: 1322lb rated Blue Rubber on a Black PU inner.

All wheels are supplied with stainless fixings.

4 & 6 YARD LOCKBAR

The same lock bar has been designed to fit both the PLAST-AX 4-yard and 6-yard FEL dumpsters.

PLAST-AX lock bars are simple, robust, and engineered with suitable tolerances to handle intended conditions of use.

Every lid pair is immaculately uniform. When you care, every detail matters.

FEL DUMPSTER
Features

PLAST-AX FEL LIDS

Big Win.

Inherent flex and impact resistance to last.

Moulded evenly with strong corners, thick edges, and consistent strength.

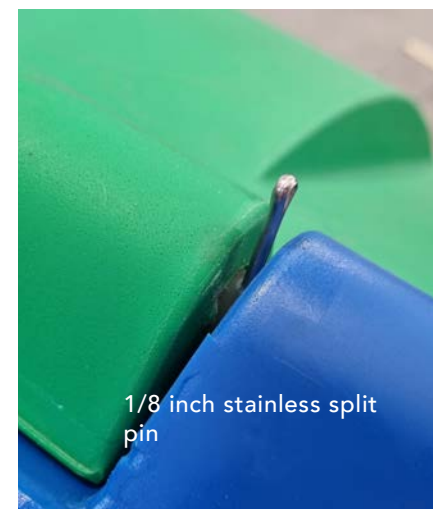

Every lid pair sits square, flush, and tight together.

It's dumpsters and lids together, that's the key.

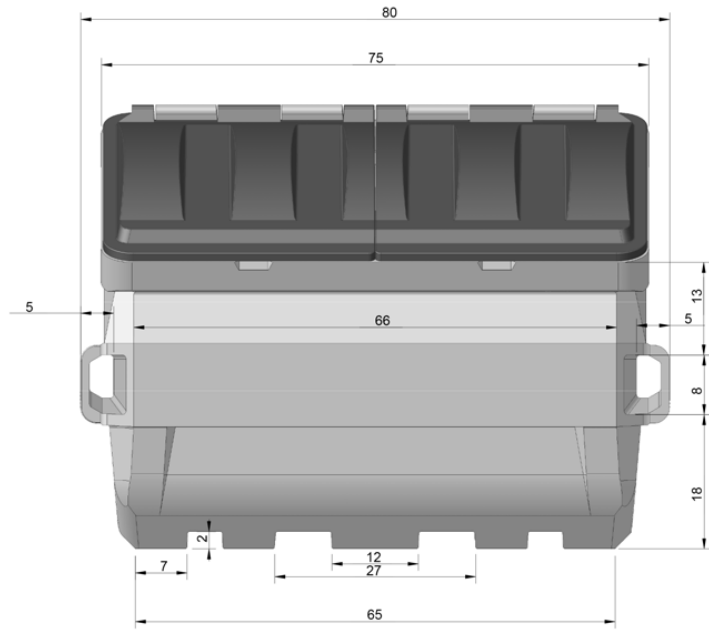

The fibreglass hinge-rod provides additional tolerance for the dumpster and lids to all move together.

(Conversely, with steel dumpster hinge rod, it's the steel hinge rod that bends – and stays bent. Then the lid busts - and you have to fix it)

Lid pairs can be supplied in any colour to suit your company branding or to assist in directing waste streams: e.g. Light Grey for cardboard, Yellow for comingled recycling.

1/8 inch stainless split pin

4-yard and 6-yard stacked for freighting
